

## **INSTRUCTION WORK WITH HIGH-PRESSURE JETS 25-200 BAR**

For further information see "HMSS-348 Arbete med högtrycksstråle 25-200 bar".

1. Eye protection and foot and leg protection must be used.
2. Do not hold hands or other parts of the body in front of the nozzles.
3. Regulations banning minors from using high pressure equipment can be found in AFS 1990:19.
4. If there is leakage from the connections or couplings between hoses, the high pressure jet must not be used. Remedial action must also be carried out immediately on small leaks.
5. It is advisable to try the reaction force and the size of the change in the reaction force before starting work.
6. Ensure that electrical cables are intact and positioned so that they are not exposed to water, and that the high-pressure unit is not exposed to spray from the nozzle.
7. Personnel working with water jet pressures exceeding 200 bar must have undergone specialist training.
